

IN THE CLAIMS

Please amend Claims 1-2, 4 and 9-10 cancel Claims 5-8 and 11-16, and add new Claims 17-30 as follows (*a marked-up set of Claims as presently amended is attached hereto as Appendix A*):

1. A method of calibrating positions between a location sensing electronic device and an electronic device coupled to a display device, comprising the steps of:

projecting an image onto a surface of the location sensing electronic device;

detecting a touch at a predefined point on the surface of the location sensing electronic device; and

calculating a relationship between the predefined point on the surface of the location sensing electronic device and a position on the display device;

wherein upon detecting the touch, the calculating step is initiated.

2. The method of claim 1, wherein detecting a touch at a predefined [calibration] point comprises detecting selection of an actual button on the surface of the location sensing electronic device.

4. The method of claim 1, wherein detecting a touch at a predefined [calibration] point comprises detecting selection of a projected button on the surface of the location sensing electronic device.

9. A system for calibrating positions between the surface of a location sensing electronic device and a display device of an electronic device, comprising:

a location sensing electronic device including a location sensing surface;

an electronic device including a display device, the electronic device in communication with a projection device and the location sensing electronic device;

the projection device including means for projecting an image on the location sensing electronic device; and

a calibration initiation means distant the electronic device;

wherein upon activation of the calibration initiation means, positions between the surface of a location sensing electronic device and the display of an electronic device are calibrated.

10. The system of claim 9, wherein the calibration initiation means is a projected button on the surface of the location sensing electronic device.

17. In a method of calibration including the steps of (i) providing a location sensing device, (ii) providing an electronic device, (iii) initiating the calibration, and (iv) performing the calibration of positions between the location sensing device and the electronic device, an improvement wherein the step (iii) of initiating the calibration comprises initiating the calibration at a location distant the electronic device.

18. The improved method of calibration of Claim 17, wherein the location sensing device is a whiteboard, and

wherein the electronic device is a computer.

19. The improved method of calibration of Claim 17, further comprising the step of projecting an image onto the location sensing device.

20. The improved method of calibration of Claim 17, wherein the step of initiating the calibration at a location distant the electronic device comprises initiating the calibration with an actuation of the location sensing device.

21. The improved method of calibration of Claim 20, wherein the actuation of the location sensing device is by stylus actuation.

22. The improved method of calibration of Claim 21, wherein the actuation of the location sensing device is by stylus actuation of an image of a button.

23. The improved method of calibration of Claim 22, wherein the actuation of the location sensing device is by an electronically-detected stylus over an image of a button.

24. The improved method of calibration of Claim 20, wherein the actuation of the location sensing device is by a touch.

25. The improved method of calibration of Claim 17, wherein the step of initiating the calibration at a location distant the electronic device comprises initiating the calibration with the actuation of a button on a surface of the location sensing device.

26. The improved method of calibration of Claim 17, wherein the step of initiating the calibration at a location distant the electronic device comprises initiating the calibration with the actuation of a button on a frame of the location sensing device.

27. The improved method of calibration of Claim 17, wherein the step of initiating the calibration at a location distant the electronic device comprises initiating the calibration with a voice command.
